Tornado MP 4.6m Mega Nautica

Tornado Boats - The worlds toughest boat

- Fast, versatile, rugged, and incredibly comfortable in all conditions...

With over 30 years at the forefront of product innovation Tornado Boats is one of the world's most recognised brands in the field of the Rigid hull Inflatable Boats – RIB's. The wide range of Tornado boats, from small tenders to large passenger boats are in use around the world with Commercial users, Government Departments, Military Applications, The Tourist Industry, Dive Clubs and the Private User.

How to choose the right Tornado

At Tornado we have been designing RIB's for bespoke applications alongside our standard range of boats to give our customers the best boat to suit any need.

To get the best from the unique range of Tornado designs we have a network of dealers, skilled in advising all our clients as to the best options for their particular requirements.

Our full model range and options are available on our website - www.tornado-boats.com

Which product line? Which model?

At Tornado we design and manufacture "The world toughest" RIB. Strong, durable boats that have unique design features to accommodate many uses and inspire confidence when being used in all kinds of weather - all year round – in The Polar Ice in Greenland or under the southern hemisphere sun.

We have a range of 3 uniquely designed product lines which gives the user a number of models to choose from, The entire range is on page 23 of this brochure.

High Performance - Sport boats

The High Performance – Boat range is designed with a narrow 'V' which enables the boat to cut through even worst sea conditions while still giving generous internal space. The High Performance RIB's are used where failure is not an option. These models are used for long distance cruising, commercial wild charter, rescue, and as sailing support boats.

Multi Purpose - The versatile RIB

Multi Purpose Boats - Dive and commercial boats, are used in a variety of testing environments where safe and secure handling load are required. The profile of the hull forms a slightly wider 'V' than the High Performance Boats, which does not prevent the Multi Purpose RIB from giving you a steady and extremely fast and dry ride. The broader hull gives more load and passenger space - a perfect tool for almost any purpose! Used in many dive club branches around the world, for patrol, rescue, or just for fun.

Super - Great loading capacity

The Super line is the widest of the Tornado Ribs's range This unique Tornado design gives unrivalled sea keeping while having the advantage of a huge carrying capacity, thus having more equipment or passengers on board. This range of Tornado boats are fast Offshore RIB's and as with all Tornado models they afford the Crew a dry, fast and safe ride.

Speed and choice of hull

The choice of your new Tornado Rib, depends on the demands and requirements of the customer, this combined with the correct choice of engine and hull combination will give you a truly fantastic boat. To get the best advice we always recommend that you contact a Tornado dealer or our Head Office so we can discuss your use and requirements to help design your new Tornado Rib.

HP 7.5m

Delivery - How long?

It usually takes 9-12 weeks from order to delivery. The delivery time can vary depending on the season and your design.

The Tornado factory delivers Rib solutions worldwide and is busy throughout the year. Your dealer or Head Office will be able to advise current delivery time.

Warranty

All Tornado Boats come with an extended 3 year back to base warranty and are CE certified by HFI, an internationally classified body.

Production - One off design

Each boat is unique and adapted to the individual customer's needs and requirements. The wide selection of accessories available are complimented by one-off design solutions. This makes it possible for Tornado Ribs to design the exact boat for you need.

Own production

All Tornado Boats are manufactured in our own factory using Tornado Staff trained in the unique manufacturing techniques required to produce the 'Worlds Toughest boats'.

All our moulds, consoles, seats, revolutionary shock mitigating suspension seats, fuel tanks, stainless steel parts and the strongest tubes on the market are all produced, installed and tested 'In House' High quality - 100% Tornado.

How to choose equipment?

Choosing the right equipment is essential. Come and visit our head office and warehouse in Denmark, or one of our many Worldwide Dealers and have a look at the boats we have in our various showrooms. The Tornado website gives examples of current options available for your RIB's and the many other accessory options that we offer. See the address of the head office at the back of the brochure or visit our website at www.tornado-boats.com.

Contact your local dealer and we will guide you concerning choice of model, console, seats, accessories and the finishing of the boat. Whether you want outboard or inboard engines with stern or jet drive, or just a hull without console or something completely different - you decide. Discuss with your Tornado dealer, your needs and we will create a drawing of the boat so you can see what your new Tornado will look like, prior to delivery.

Tornado MP 4.6m

MP 4.6m Mega Nautica

Multi Purpose 4.6m

The Tornado 4.6m model is one of the most popular boats for the private user. A truly remarkable boat for the space and applications available to the owner of this model. The 4.6m is very compact and easy to handle both on the water and on land.

The hull is designed with a medium deep V-shape and high lifted bow which helps to secure remarkable sea keeping properties for a boat of its size.

The 4.6m is in use by rescue organisations as well as many private users. As with all of the Tornado boats we manufacture the 4.6m exactly to the demands of the user. This includes both colour choices, consoles, seats, lockers and other fittings.

Specifications	
Length:	4850 mm
Beam:	2000 mm
Weight: (basic boat)	220 kg
Max. capacity:	790 kg/ 8 pers.
Max. horsepower:	70
Max. engine weight:	110 kg
Air chambers	5
CE Category:	C

MP 4.6m FRV

Check the entire range and more detailed specifications at page 23.

MP 5.2m SAR

Multi Purpose 5.2m

The Tornado 5.2m model is well suited for a range of uses including rescue and coaching. The hull is for its short length designed with extra load carrying capacity and the boat can be fitted with heavy engines. This model is designed to give precise handling at both low and higher speeds, while offering plenty of space and still keeping the model very compact.

The 5.2m is a very capable boat, easily launched and operated.

As with all of the Tornado boats we manufacture the 5.2m exactly to the demands of the user. Contact your local dealer or our head office for further information.

MP 5.2m Team 49'er

Specifications	
Length:	5250 mm
Beam:	2350 mm
Weight: (basic boat)	300 kg
Max. capacity:	1000 kg/ 8 pers.
Max. horsepower:	100
Max. engine weight:	185 kg
Air chambers	5
CE Category:	C

Check the entire range and more detailed specifications at page 23.

Tornado HP 5.4m

HP 5.4m Kaløvig

High Performance 5.4m

The Tornado HP 5.4m model is, together with its larger sister model, one of the most popular boats in use by sailboat coaches all over the world. Ideally suited for anything from a family leisure boat used for waterskiing to a serious rough water rescue craft.

The deep 'V'-hull design of this boat gives greater lift at low speeds and planes faster whilst remaining a true offshore going boat.

The HP 5.4m is a high-speed boat that moves well in the waves, a perfect boat for leisure as well as a working tool.

Specifications	
Length:	5550 mm
Beam:	2350 mm
Weight: (basic boat)	310 kg
Max. capacity:	1100 kg/ 8 pers.
Max. horsepower:	100
Max. engine weight:	165 kg
Air chambers	5
CE Category:	C

Check the entire range and more detailed specifications at page 23.

MP 5.8m FRV

Multi Purpose 5.8m

The Tornado MP 5.8m is a true leader in its class. A truly remarkable boat for the space and applications available to the owner of this model.

The hull is designed with a medium V-shape and high lifted bow, which gives a comfortable ride in all weather conditions.

The MP 5.8m is very agile whilst maintaining a large load carrying capability and enviable sea keeping.

As with all of the Tornado boats we manufacture the HP 5.8m exactly to the demands of the user. Contact your local dealer or our head office for further information.

Specifications	
Length:	5900 mm
Beam:	2550 mm
Weight: (basic boat)	450 kg
Max. capacity:	1300 kg/ 10 pers.
Max. horsepower:	150
Max. engine weight:	240 kg
Air chambers	5
CE Category:	C

Own Production

Tornado Boats are own production all the way through - We still make everything ourselves!

From moulds, consoles, seats, even shock mitigating suspension seats, fuel tanks and stainless steel parts to our outstanding pontoons made of Polyurethane, the best tube material for professional RIB's. Some of the strongest tubes on the market.

Check the entire range and more detailed specifications at page 23.

MP 5.8m FRV

Tornado HP 5.8m

HP 5.8m SBK

High Performance 5.8m

The Tornado HP 5.8m model is, together with the HP 5.4m model, the first choice among sailboat coaches around the World. The sharp V-shaped hull enables the boat to cut its way through even very large waves and makes the HP 5.8m perfect for coaching but is also a good choice as work boat in other branches for rescue, diving or police work and is an extremely capable model for the private user.

As with all of the Tornado boats we manufacture the HP 5.8m exactly to the demands of the user. This includes colour choices, consoles, seats, lockers and other fittings.

Max. engine weight:	1000 kg
Air chambers	7
CE Category:	B

Check the entire range and more detailed specifications at page 23.

Some history

Tornado Boats was started in 1975 by David Haygreen.

One of the early pioneers in the development of the RIB, David, an ex professional diver and aircraft engineer, wanted a boat for his Marine Survey company and, finding nothing commercially suitable, decided to build his own. The result, a 5.5m boat, was a great success and powered by a 50HP motor (big at the time!) attracted much interest. David was constantly asked by others where they could get one, but he was reluctant to build more at first. Fortunately his passion for design and love of the sea won out, and the decision was made to develop a production boat. A name was required, and with a copy deadline for the first advert only an hour away, the name Tornado came to mind. The Tornado was born.

The first!

The first Tornado, a 5m, featured the simple logo of a round circle with a 'T' inside. Amazingly some of these boats still exist – 30 years on !

Production began slowly with one boat being built every three to four weeks. Manufacture was done from home with the hulls laminated in the garage, and the tubes assembled on plywood sheets laid across the bed – those were the days !

Slowly the Tornado's reputation for strength and performance grew and an invitation to test a boat for the British Navy was received. A test which the Tornado won. The result was a production run of over 140 boats and a move to a new factory in Hull !

Moving the production to China

Never truly interested in mass production Tornado Boats continued to grow the business, concentrating more on development and innovation with the custom building of boats. Searching for quality in performance and build. Such dictates came at a price with demand constantly exceeding supply and delivery dates too long for many to wait. The decision was made in 2005 to move production to China – 'the workshop of the World'. Skilled labour was more plentiful and the cost savings could be put back into speeding up production, developing new models and raising the quality of the materials used in the construction

With the business growing at such an exponential rate, David realised that the company needed someone else to help run the day-to-day business..

In 2008 he was joined by Kathrine and Lars Hjorth, the Danish dealers for Tornado Boats, and the head-office was moved to Aarhus in Denmark. Together the new management team are re-energising Tornado to ensure the successes of the past are partnered with new ideas for the future.

High-Tech and old craft traditions

The team of trained Tornado technicians lay the entire hull by hand. 12 laminators do all the work. That sounds like a backward step, but it is not. Boats are generally constructed with a mixture of chopped strand mat and a roving. You can spray the mat, but you cannot spray the roving. Roving, because of it's higher glass content and because the glass filaments are continuous strands, is significantly stronger than mat, so the more you use the better. The strength of a hull is in the fibre reinforcements and not directly in the resin. The resin has to be strong as this is what binds it all together. At Tornado we use a combination of polyester and vinylester to get the strongest and lightest boats.

Best materials available

All Tornado boats are made from the best materials on the market. As one of the few RIB manufacturers in the world we manufacture our own pontoons from 100% Polyurethane fabric. A material that is far superior in every way to common fabrics like Hypalon and PVC. Polyurethane is especially recommended by military experts for professional RIB's.

Polyurethane Facts

- Polyurethane has a very long service life
- Very high mechanical strength against wear and tear as well as point loads
- High resistance to UV
- Exceptional air-tightness
- Rarely punctures
- Easier/less time-consuming to repair compared to other materials
- Resistant to most solvents like oil and petrol

 The weights of the boats given are for the basic rescue boat. Care must be taken to allow for the weight of any ancillary equipment fitted including motor and fuel. This is important when calculating the trailer requirements.
 Horse Power ratings can be increased for certain Military, Commercial and Racing uses of the craft. Please see the manufacturer for guidance.
 Due to a programme of continuous development and improvement specifications may change without notice.
